

Alan McDade

Alan McDade is responsible for the strategic and operational direction of Lumacron Technology, including the development and delivery of superior products and solutions.

Since co-founding Lumacron in 2014, McDade has played a pivotal role in growing the company from just four employees to a successful, multi-national company, overseeing all disciplines of the design team and commercial activities.

Previously, he was commercial director for Aliathon Technology, where he led the sales teams in building customer relationships, understanding market requirements and priorities and negotiating contracts. He started his career as a field application engineer at Altera, and later was promoted to Northern European field application engineer manager.

He holds a Higher National Diploma in electrical and electronic engineering from the University of the West of Scotland.
